Intel® Technologies Portfolio

Available for driving optimized performance

* Graphic shows just a sample of partners from a large fast growing ecosystem in each swim lane

SERVICE CHAIN EXAMPLE

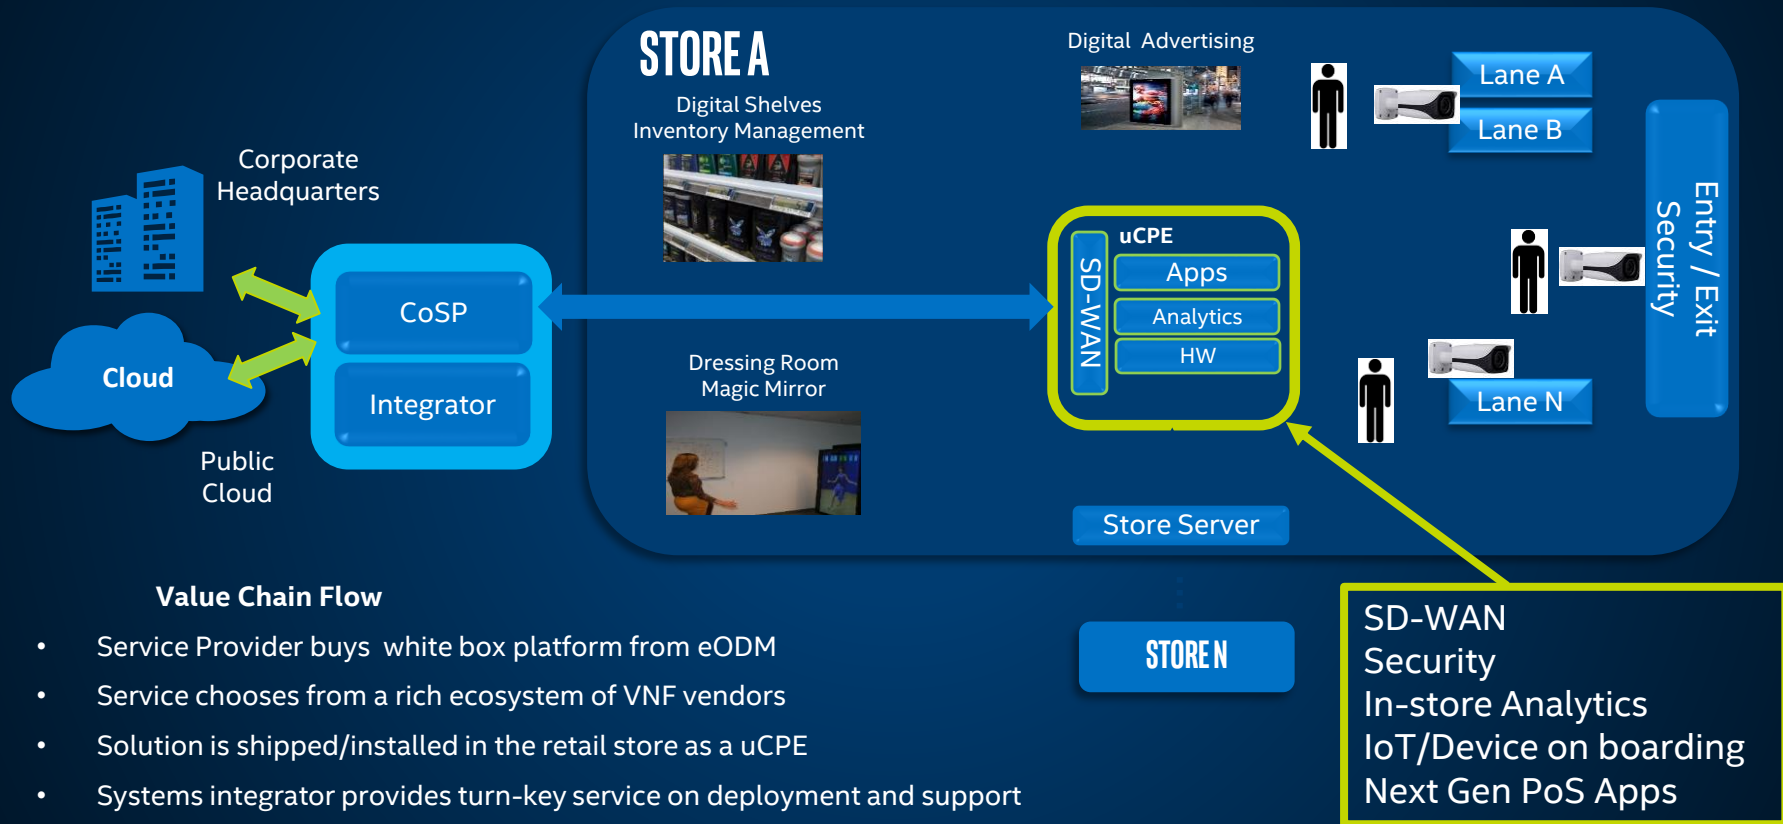

DMS GUI

- Service Insertion & Chaining
- Security Control & Orchestration
- Secure IoT Device Onboarding

DEPLOYMENT EXAMPLE: RETAIL

INTEL® XEON® D2100 PROCESSOR FOR CUSTOMER PREMISES EQUIPMENT (CPE)

INTEL® XEON® D-2100 PROCESSOR: NEXT-GEN CPE

4X More Memory Capacity

More Application Scale

Enhanced Intel® QuickAssist Technology 2.5X Faster Crypto Processing⁶

Enhanced I/O, PCIe*, MISO, Intel® Ethernet Implementation Flexibility

1.125X More Processing Cores More Virtualized Network Functions⁵

ENHANCED CAPABILITIES AND CAPACITY WITH LOWER TCO
FOR SPACE-CONSTRAINED CPE SOLUTIONS

UP TO 2.9X
NETWORK PERFORMANCE IMPROVEMENT
COMPARED WITH INTEL® XEON® D-1500 PROCESSOR NETWORK SERIES¹

New Intel® Xeon® D-2100 Processor
Intel's Fastest Low-Power Edge Processor

Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors.

Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more complete information visit www.intel.com/benchmarks.

INTEL® XEON® SCALABLE PROCESSORS WITH INTEL® QUICKASSIST TECHNOLOGY (INTEL® QAT)

F5 Networks

Virtual Gi-LAN Firewall (TLS)

2.4x

Throughput 6230N+QAT vs 6230N

Fortinet Fortigate

Virtual Next-Gen Firewall

3x VPN

Throughput 6230N+QAT vs 6230N

Nokia Nuage

Virtual Network Services Gateway

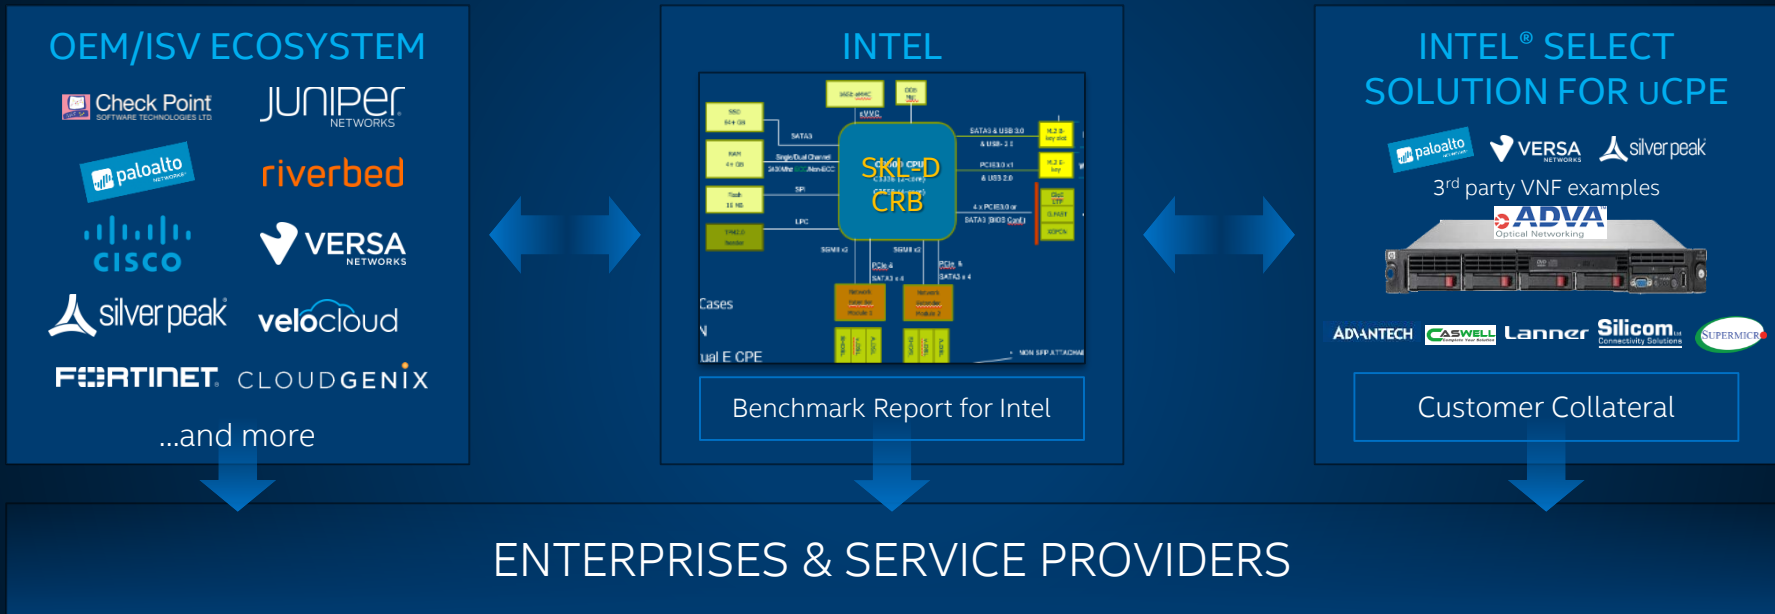

2x SDWAN

Throughput 5218N+QAT vs 5118

Performance results are based on testing as of dates shown in configuration and may not reflect all publicly available security updates. See configuration disclosure for details. No product or component can be absolutely secure. Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors.
