AI-Driven System Behavior Analysis Transforms Telecom Troubleshooting

Machine learning-powered System Behavior Analysis reduces troubleshooting time from hours/days to minutes, increases accuracy, reduces wasted time in analysis, and results in fewer faults in the final product. When applied for event analysis, time analysis, fault grouping, and integrated into CI pipelines and FOA activities, allows for immediate complex system deviation identification.

The POC provides an overview of the applicability and advantages SBA offers for Intel® FlexRAN™ reference software. Solution is ready out the box for target customer customization according to the specific requirements.

TietoEvry Create offers design, data, and digital engineering services for telecoms and network vendors. With 10,000 global engineers, we deliver digital solutions that meet customers' business goals. Our telecom expertise includes product development, AI/ML-driven services orchestration, multivendor integration, and network design. We aim to drive innovation, enhance efficiency, and stay ahead in the industry.
