ASUS IoT

ASUS IoT Autonomous-Driving AI Solutions

ASUS IoT's autonomous-driving AI solutions combine advanced edge computing and AI technology to enhance autonomous driving capabilities. This ensures accurate data acquisition, real-time processing and AI-driven decision-making, optimizing fleet operations, enhancing safety and improving efficiency. It enables real-time insights for smarter, safer autonomous driving. Ideal for industries relying on autonomous tech, it provides data-driven insights and better fleet management.

Paired with ASUS IoT PE8000G, a rugged edge AI GPU computer, the solution supports dual 450W GPU cards for demanding AI workloads. Powered by the latest Intel® Core™ processors, PE8000G offers reliability with 8-48V DC input, ignition power control, and thermal design for -20°C to 60°C operation, making it perfect for extreme environments and industrial applications.
