

Intelligence is Your Edge

Powered by Intel

ONLOGIC

AX300

The Axial AX300 is a highly configurable edge computing solution designed to manage complex workloads in demanding IT and OT environments. Offering extensive customization options, flexible deployment, robust security, and cost-effective remote management, it enables seamless virtualization, on-premise AI training, data analytics, and large language model processing at the edge.

Built for scalability and efficiency, the AX300 supports high-performance computing while ensuring reliability in mission-critical applications. Its advanced security features protect data integrity, while remote management simplifies operations, reducing downtime and maintenance costs. Whether deployed in industrial settings, data centers, or remote locations, the AX300 delivers the power and flexibility needed for modern edge computing.
